What sets **Future Slim** apart
is its advanced material and surface technology:

Easy to keep clean – it does not attract dust – thanks to the use of antistatic paint*, the molding stays clean for longer.

Made of HDPS material – durable, stable, and resistant to daily wear and tear.

Solid-colored – deep black throughout the entire cross-section, with no visible scuffs or scratches.

Premium aesthetic finish – a uniform look without the need for frequent maintenance.

*The lacquered surface of the Future Slim profile reduces static electricity buildup, thereby lowering its tendency to attract dust during daily use. To maintain an optimal antistatic effect throughout its entire lifespan, it is recommended to refresh these properties using a **dedicated antistatic product** or a **1% solution of isopropanol in distilled water**.

Mounting options:

On glue.

On mounting clips with spacers.
